

Amendments to the Specification:

Please replace the paragraph beginning at line 15 on page 1 with the following amended paragraph:

Over the past ten years, the cellular phone has evolved from a device used only by an elite segment of the population to a device used by the masses. One research report indicates that the number of cellular phone subscribers in the United States alone has increased from approximately 3.5 million at the start of 1990 to 60 million in 1998 to over 100 million in year 2000. (The Cellular Telecommunications Industry Association, *Semi-Annual Wireless Industry Survey*, March 2001, at <http://www.wow-com.com/statsurv/survey>). According to another report, 38% of consumers say that they have a lot (16%) or some (22%) interest in having their cellular phone replace their home telephone, forming primary and secondary markets for “cutting the cord.” (P.D. Hart Research Associates, *The Wireless Marketplace in 2000*, Feb. 2000). In addition, research also shows that cellular phone subscribers are looking forward to wireless data services to include more options, such as wireless e-mail, text messaging and Internet access.
